INTRODUCTION

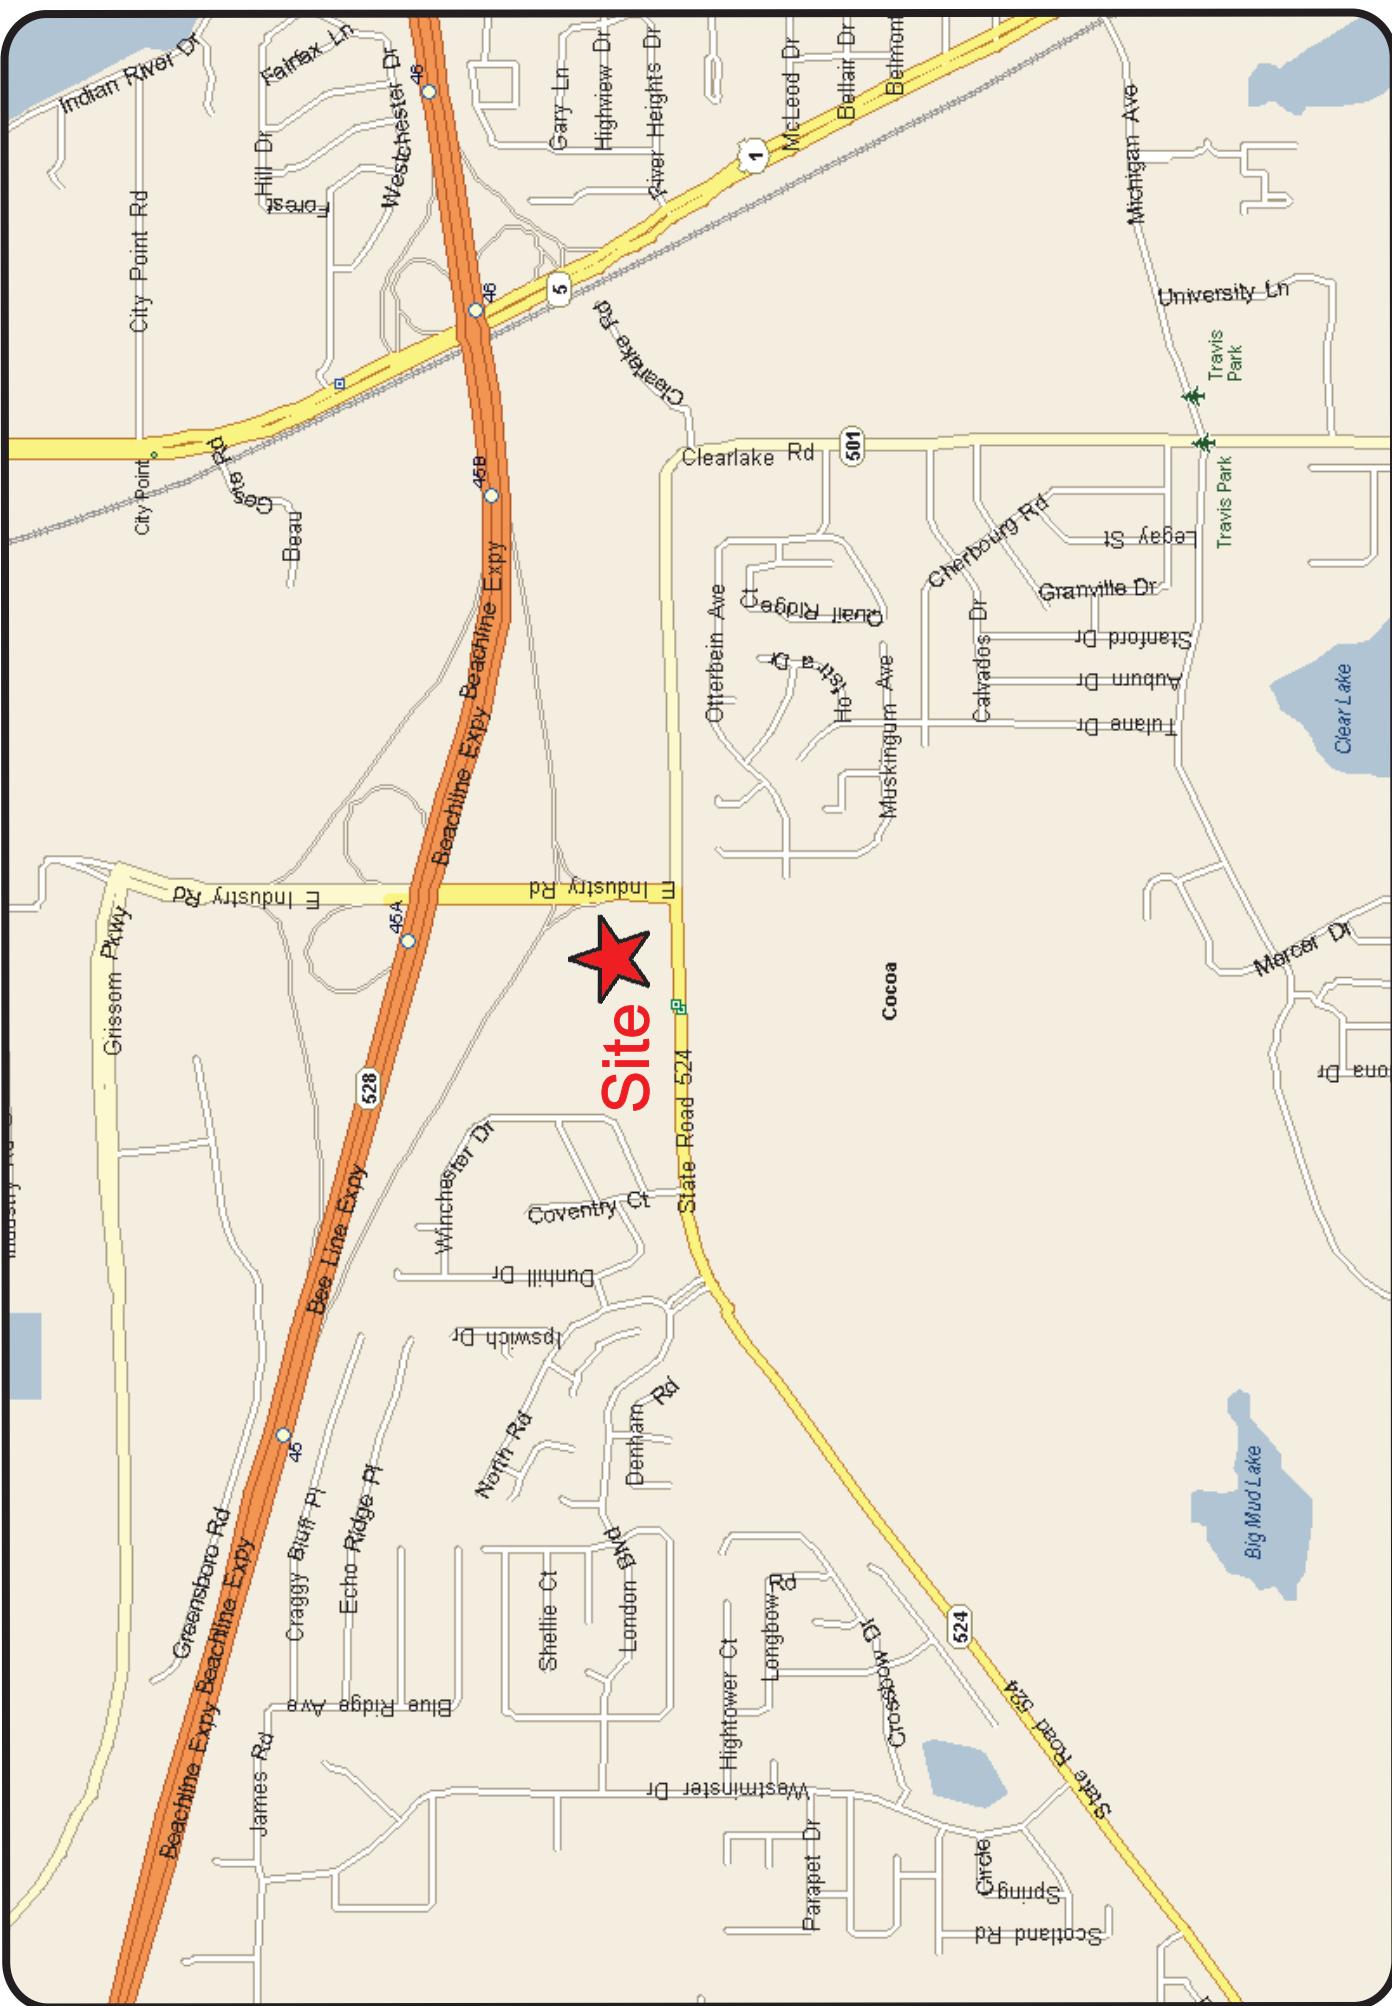

This analysis was undertaken in order to assess the traffic impact of the proposed development of the Cocoa Apartments in Cocoa, Brevard County. Located in the northwest corner of the SR 524 and E. Industry Road intersection, the development will consist of 280 multi-family dwelling units and 20,000 square feet of retail commercial in an adjacent outparcel. **Figure 1** depicts the site location and the area roadways.

Data utilized in this study consisted of a site plan provided by Project Engineers, traffic volume data and Level of Service standards obtained from the Space Coast MPO. Additionally, intersection turning movement counts were collected by Traffic Planning and Design, Inc. staff.

EXISTING CONDITIONS ANALYSIS

A capacity analysis was performed for the study roadway segments and intersections identified utilizing a 5% significance threshold as per Brevard County guidelines. As will be documented subsequently, only a short segment of SR 524 adjacent to the project site will be significantly impacted. Therefore, this and other adjacent roadway segments and the closest signalized intersections were included in the analysis. The analysis was conducted utilizing existing traffic volumes to establish the current operating conditions for the daily conditions for the roadway segments and P.M. peak hour traffic conditions for the intersections.

Roadway Segment Analysis

The adjacent roadway segments were analyzed by comparing their existing traffic volumes with the adopted LOS/capacities for daily traffic conditions. The existing daily traffic volumes and adopted LOS capacities were obtained from the Space Coast TPO. Pertinent pages from the traffic count database are included in **Appendix A**. The existing capacity analysis is summarized in **Table 1**.

* Based on the Space Coast TPO Traffic Count Spreadsheets

As shown, the existing conditions analysis reveals that the study roadway segments currently operate satisfactorily above their adopted Level of Service capacity.

Intersection Analysis

In addition to the adjacent roadway segments, three signalized intersections on SR 524 were included in the analysis. The intersections were analyzed in accordance with the procedures of the *Highway Capacity Manual (HCM 6E)* and *Highway Capacity Software (HCS)*. In the analysis, existing P.M. peak hour traffic volumes and intersection geometry were used. The intersection counts were made in August 2020 and may not represent normal traffic conditions due to COVID-19 pandemic. Therefore, a COVID factor of 1.23 was determined by comparing 2019 counts with the 2020 counts on Industry Road just north of SR 524. This factor was applied to the existing counts in addition to the Seasonal Factor (SF) of 1.11 obtained from FDOT for Brevard County. The adjusted intersection volumes in the form of turning movement counts are depicted in **Figure 2**. The intersection traffic counts, and adjustments factors are included in **Appendix B**. The results of the intersection capacity analysis are summarized in **Table 2**.

PROPOSED DEVELOPMENT AND TRIP GENERATION

The proposed development will consist of 280 multi-family dwelling units and 20,000 square feet of retail commercial. Access to the development will be provided by a signalized full access on SR 524 which currently serves the existing CVS store. **Figure 3** depicts the site plan and its access configuration. To determine the impact of the development in the area, an analysis of its trip generation characteristics was made. This included the determination of the number of trips generated by the site and their distribution onto the surrounding roadways.

Trip Generation

Trip generation rates were obtained from data contained in the Institute of *Transportation Engineers (ITE) Trip Generation Manual, 10th Edition*. The trip generation calculation of daily and P.M. peak hour volumes is summarized in **Table 3**, and the trip generation charts are included in **Appendix D**. The retail commercial development will generate 34% of its trips from the existing traffic stream on SR 524. Subtracting the pass-by trips results in new net trips to be added to the area roadways. The proposed development is estimated to generate 3,394 new net daily trips, 257 P.M. peak hour trips to be added to the area roadways.

Trip Distribution/Trip Assignment

To determine the distribution of the project trips in the area, the CFRPM (V6.1) was used. A slight modification was made to this model to add a TAZ representing the project and its SE data. Subsequently, the model was run with a Select Zone Analysis which produced a distribution of the project trips in the area. The model-generated distribution is included in **Appendix E**. The project trip distribution in the project vicinity is illustrated in **Figure 4**. Utilizing this distribution pattern, the development's daily and P.M. peak hour trips were assigned to the area roadways also shown in Figure 4.

Significance Analysis

As per Brevard County procedures and requirements, the influence area of the proposed project will include those roadway segments where project trips consume 5% or more of the Maximum Allowable Volume (MAV). Based upon the significance test performed, as shown in **Table 4**, the project will consume 5% or more of the adopted MAV at only a short segment of SR 524 from the CVS/Site Access to Industry Road. This segment along with the adjacent roadway segments of SR 524, Industry Road and Clearlake Road were included in the analysis.

Additionally, the following intersections were included in the analysis:

- SR 524 & London Boulevard
- SR 524 & Site Entrance/CVS Entrance
- SR 524 & Industry Road

PROJECTED TRAFFIC CONDITIONS

Projected traffic conditions were analyzed using projected traffic volumes for the roadway segments and study intersections in 2023. To determine the projected traffic volumes for the project's buildout year, background traffic volumes were combined with the approved Integra Cocoa trips plus project trips. Background traffic volumes were estimated with the use of an annual growth rate of 2.00%. The historical trends analysis of traffic counts on SR 524 and Industry Road in the project vicinity indicated an annual growth rate ranging from 1.23% to 2.10% to the design year. The trends analysis charts are included in **Appendix F**.

Roadway Segment Analysis

Table 5 is an analysis of the projected traffic conditions for the study roadway segments. This table lists the roadway segments along with their number of lanes, functional classification, existing/ projected traffic volumes, LOS/capacity and resultant Level of Service. The table reveals that the roadway segments are projected to operate satisfactorily within their adopted LOS standards.

Intersection Analysis

The projected traffic volumes at the study intersections, and the two site access driveways are depicted in **Figure 5**. The figure shows the background P.M. peak hour traffic along with traffic generated by the project. The intersections were analyzed utilizing *Highway Capacity Software (HCS)* in accordance with the *Highway Capacity Manual (HCM 6E)*. The results of this analysis as summarized in **Table 6** indicate satisfactory traffic operating conditions under projected conditions. The *HCS* capacity analysis worksheets are included in **Appendix G**.

Site Access and Auxiliary Lanes

The site is proposed to be served by the existing signalized full access driveway on SR 524 which currently served the CVS store. A 465-foot-long left turn lane and a 290-foot right turn lane exist at this site access driveway. To determine the adequacy of these turn lane lengths, the following analysis was performed:

$$\text{Length Required} = \text{Deceleration Distance (DD)} + \text{Queue Length (QL)}$$

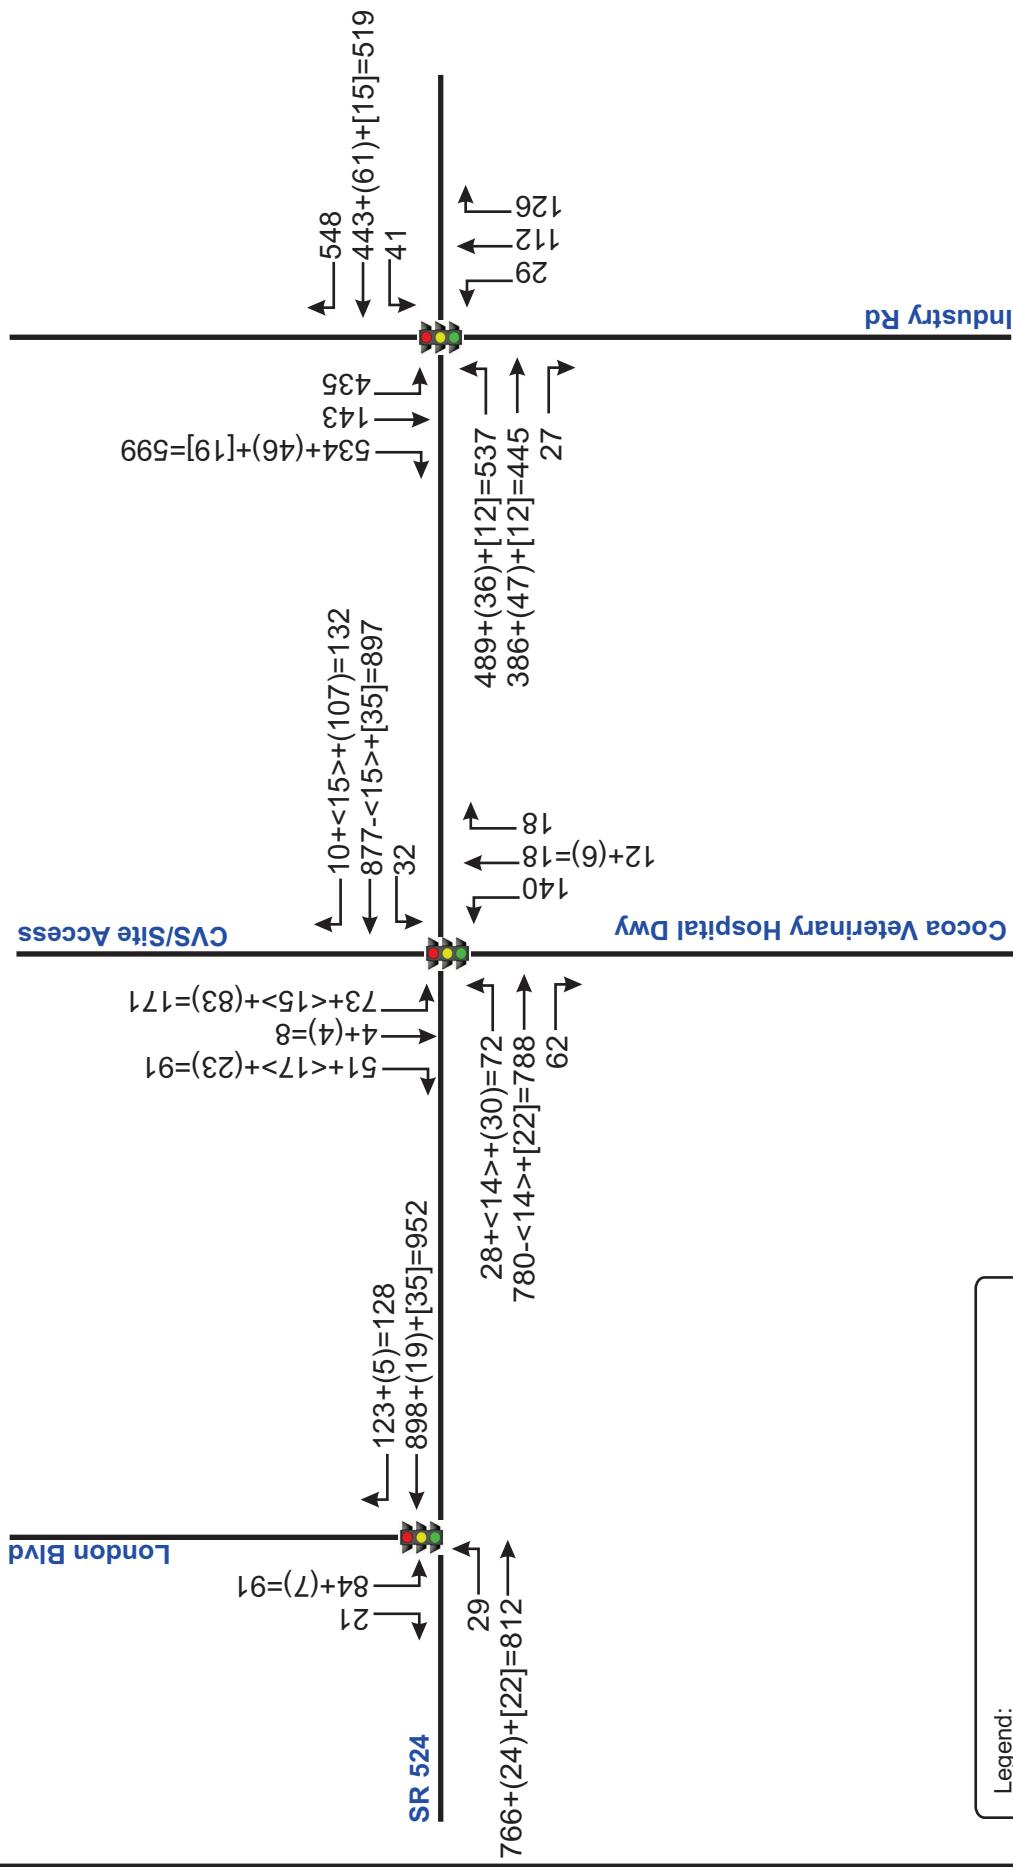

- DD = 185 ft (for 45 mph), from FDOT Index 711-001
- Left Turn Lane required = 185 + 126 ft QL from HCS = 311 ft.
- Right Turn Lane Required = 185 + 81 ft QL from HCS = 266 ft

Based upon this analysis, the existing turn lane lengths are adequate.

STUDY CONCLUSIONS

This traffic analysis was conducted in order to assess the traffic impact of the proposed development of the Cocoa Apartments in Cocoa, Brevard County. Located in the northwest corner of the SR 524 and E. Industry Road intersection, the development will consist of 280 multi-family dwelling units and 20,000 square feet of retail commercial in an outparcel. The findings of this analysis are as follows:

- The proposed development will generate 3,394 new net daily trips and 257 P.M. peak hour trips.
- The analysis of existing conditions indicates that the impacted roadway segment and the study intersections currently operate at satisfactory Levels of Service.
- The analysis of projected traffic conditions revealed that the impacted roadway segments and the study intersections will not be deficient in traffic capacity. The roadway segments and the intersections are projected to operate at satisfactory Levels of Service with project trips added.
- The site is proposed to be served via an existing full access connection on SR 524 which is signalized. There are an existing right and left turn lanes which would be adequate for the projected turns as a result of the proposed development.
